Note: Error related emails will be sent to manoj@gmail.com

Error Code	Description
401	LMS API disabled or secret key is wrong
500	Value for one or multiple parameters is not provided
200	Enquiry inserted successfully

Developers Guidelines :

1.Please refer this URL Send values for campaigning country, campaigning state, campaigning city from database only. Value should be matching to the database value which is available for your reference on the URL.

2.Please refer this URL Send values for campaigning keywords from database only. Value should be matching to the database value which is available for your reference on the URL.

3.Please refer this URL Send values for campaigning placement from database only. Value should be matching to the database value which is available for your reference on the URL.

4.Refer the above parameters guidelines or Settings currently applicable for this API section properly to apply mandatory validations on your form fields.

5.To verify customers mobile number or email id, there is no need to implement or integrate any thing from your side. Verification sms and emails will be sent from the LMS system automatically and when customer clicks on the verification link email id or mobile number will be flagged as verified directly.

6.Please note that if you send mobile number with country code as +91 (India) then mobile number should be 10 characters, system will not accept less or more characters then 10. But if you are sending any other country code then +91 (India), you are allowed so send 12 characters in mobile number field. Please apply your form validations as per the same.
